PROFESSIONAL SUMMARY

Lead Android Engineer with 13+ years of experience building scalable Android platforms, Wear OS solutions and enterprise mobility systems across maritime, energy, IoT and e-commerce domains. Currently leading Android at SOL-X, an ISO 27001-certified connected worker safety platform serving global energy and maritime clients including Shell, Chevron and Mubadala. Specialised in multi-module Clean Architecture, product-flavor white-label platforms, multi-hardware Wear OS systems, MQTT and BLE offline-first sync, payment and POS integrations, and end-to-end mobile-to-backend integration - owning API contracts, authentication and data models across PHP and Node.js services on MongoDB, PostgreSQL, MySQL and SQLite. Has led 20+ engineers and delivered award-winning products to 100K+ users.

CORE COMPETENCIES

Mobile Development: Kotlin, Java, Coroutines, Flow, Jetpack Compose, Wear OS, Android SDK (API 5-35), Hilt, WorkManager, Retrofit, XML Layouts, Material Design, Android Studio, Gradle, Flutter and Dart (cross-platform)

Architecture: Clean Architecture, MVVM, MVP, SOLID, Multi-Module Architecture, Product Flavors, White-Label Platforms, Offline-First Sync, Modularization, Reusable SDK Modules

IoT and Connectivity: BLE (Bluetooth Low Energy), MQTT, NFC, RFID, Beacons, OTA Firmware Updates, Fall Detection, Geofencing, Intranet Deployments

Integrations and Backend: REST APIs, GraphQL (Apollo), API Contract Design, JWT Authentication, Firebase, Google Maps, GPS, Push Notifications (FCM), PHP, Node.js (integration)

Databases and Persistence: MongoDB, PostgreSQL, MySQL, SQLite, Room DB, DataStore, Schema Design, Migrations, Query Optimisation

Payments and Enterprise: Razorpay, PayPal, Stripe, CCAvenue, PayU, Braintree, POS Terminals, Kiosk Mode, Receipt Printers, Fingerprint Visitor Management

Quality and Delivery: Sentry, Crashlytics, Unit Testing, Integration Testing, CI/CD, Agile, Scrum, Release Management, Code Reviews, Mentoring, Git

PROFESSIONAL EXPERIENCE

Senior Android Developer

Circle Digital Ventures (CDV Technologies Pvt. Ltd.) | Chennai, India | June 2, 2025 - August 17, 2026

Owns Android architecture and delivery for SOL-X - wearable, handset and supervisor-facing safety products for global energy and maritime operations. Designed a multi-hardware Wear OS platform and offline-first data pipelines for unreliable, intranet-only vessel and industrial networks using Kotlin, Jetpack Compose, Hilt, Room, Coroutines, Flow, WorkManager and Apollo GraphQL. Leads the Android engineering team across architecture, delivery, mentoring and release governance.

Key Contributions:

- Designed a multi-hardware Wear OS platform (Lemfo, SW-EX, generic) using product flavors, isolated hardware modules and runtime device resolution for single-APK fleet deployment
- Built offline-first sync and MQTT messaging for unreliable and intranet-only vessel and industrial networks
- Delivered the Wear OS biometrics pipeline, Crew Assist SOS, digital Permit to Work, beacon decoding and NFC/RFID integration
- Built Installer, a Flutter commissioning app that scans nearby beacons over intranet-only networks and maps them to deployment zones
- Shipped smartwatch OTA firmware updates for production device fleets
- Built broker-backed MQTT integration tests to safeguard production reliability
- Established Sentry and Crashlytics monitoring for production fleet stability
- Awards: OHS New Product of the Year (2023 and 2024), WSHAsia Technology Award (2023), Best ESG Solutions Singapore (2023)

Project Lead - Android

Technoduce Info Solutions Pvt. Ltd. | Coimbatore, India | February 15, 2016 - May 31, 2025

Owned end-to-end delivery and system design across facility management, food delivery, e-commerce, matrimony and industrial applications for clients including JLL, Bajaj, Concentrix, Lam Research, Tata Communications and WNS. Owned the mobile-to-backend API contracts, authentication and data models across PHP and Node.js services on MySQL and MongoDB - contributing PHP endpoints and driving delivery with the Node.js team - and built a white-label product-flavor platform serving 20+ enterprise clients from a single codebase.

Key Contributions:

- Designed mobile-to-backend workflows - JWT authentication, data sync and API contracts - across PHP and Node.js with MySQL and MongoDB
- Built a white-label platform with product flavors serving 20+ enterprise clients from one codebase
- Integrated Razorpay, PayPal, Stripe, CCAvenue, PayU and Braintree payment gateways

- Integrated POS terminals, receipt printers and fingerprint visitor-management systems
- Implemented Google Maps live tracking, geofencing, Firebase and kiosk mode
- Delivered online and offline transaction handling for field and retail workflows
- Resolved production crashes and performance issues across the client portfolio
- Led 20+ engineers across architecture, delivery, hiring, mentoring and release governance

Team Lead - Android

Technoduce Info Solutions Pvt. Ltd. | Doha, Qatar

Directed Android engineering for Qatar operations, mentoring the team through code reviews, architecture workshops and technical coaching. Delivered Wishbox, a six-service on-demand super-app spanning customer, vendor and driver ecosystems, and championed Jetpack, modularization and product flavors to scale delivery across 100+ Android apps with consistent release quality.

Key Contributions:

- Delivered Wishbox, a six-service super-app (food, grocery, laundry, beauty, handyman, courses) across customer, vendor and driver apps
- Built Google Maps live tracking against Node.js real-time sync, Twilio and AWS
- Applied MVVM and MVP architectures through a phased production rollout (2019-2021)
- Mentored engineers through code reviews, architecture workshops and technical coaching
- Championed Jetpack, modularization and product flavors across 100+ Android apps
- Maintained consistent release quality across a large multi-app portfolio

Senior Android Developer

Technoduce Info Solutions Pvt. Ltd. | Coimbatore, India

Built production Android applications in Java and Kotlin using REST APIs, SQLite and MVVM, and contributed reusable SDK modules and architecture standards adopted across the wider team.

Key Contributions:

- Developed production apps in Java and Kotlin with REST APIs, SQLite and MVVM
- Built reusable SDK modules shared across multiple client projects
- Defined team architecture standards and code review practices

Android Developer

Agile Cyber Solutions Pvt. Ltd. | Nagercoil, India | February 24, 2013 - February 12, 2016

Sole Android developer for eyLog, the eyworks UK nursery platform, scaling an offline-first application from a single-site deployment to 77-site enterprise rollouts.

Key Contributions:

- Owned the full Android application as sole developer for the eyworks UK nursery platform
- Built offline-first data capture and sync for unreliable site connectivity
- Scaled the app from single-site use to 77-site enterprise rollouts

KEY PROJECTS

SOL-X - Connected Worker Safety Platform

Kotlin, Jetpack Compose, Wear OS, BLE, MQTT, Hilt, Room, GraphQL

ISO 27001-certified connected worker safety platform; winner of OHS New Product of the Year (2023 and 2024). Deployed to Shell, Chevron, Mubadala and offshore energy operations.

Wishbox - On-Demand Super App (Qatar)

Java, Google Maps, Node.js, MongoDB, Twilio, AWS

Six on-demand services delivered through customer, vendor and driver apps with live GPS tracking and a multi-year phased rollout.

White-Label Enterprise Platform

Kotlin, Java, Product Flavors, Clean Architecture, JWT, MySQL, MongoDB

Single codebase extended to 20+ enterprise clients, with centralised features plus per-client branding and backend configuration.

eyLog - UK Nursery Platform (eyworks)

Java, REST APIs, SQLite

Sole Android developer covering EYFS assessments, the parent portal and offline sync; scaled to 77-site enterprise deployments.

EDUCATION

MBA - Human Resource Management

Annamalai University | 2016

B.E. - Electronics and Communication Engineering

Cape Institute of Technology | 2011
